

## EEEGR Event: Offshore Synergies to enable the energy transition

5 December 2023: Dunston Hall Hotel, Norwich

With the SNS transitioning from a solely gas producing basin to one that is now home to multiple offshore wind and carbon storage projects, EEEGR and the NSTA believe now is the right time for the operating community to come together to discuss their current and future projects. There is plenty of activity underway, and planned, and this session will be an opportunity to hear more about this activity and to explore possible mutually beneficial synergies between the sectors.
